CLASSIFICATION

classifico ogni lettera creando un bounding box della lettera con altezza uguale al bounding box dell'intera parola.

`Inc = get_lettere_non_confondibili(parola)`

for lettera in parola:

if lettera is confondibile: # o/O c/C s/S

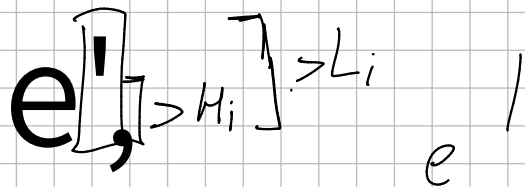

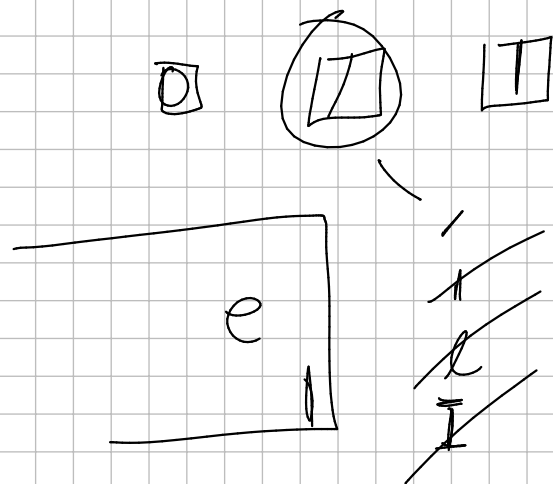

x = any in Inc non confondibile

if height(x) == height(lettera):

lettera = to_capitalize(lettera, of=x)

else:

lettera = to_opposite_capitalize(lettera, of=x)

$H_i \approx 50\%$
